

Split – 11 September 2018

Marine protected Areas Network Towards Sustainable fisheries in the Central Mediterranean – MANTIS

Stakeholder meeting N. 7

WP 2 – Data compilation and data management for modelling

This project has been funded with support from the European Commission

WP 2 – Data compilation and data management for modelling

Objectives: provide a database (DB) that can store all the relevant georeferenced data and information for modelling in WP3, as well as model outputs

GRID

SEAGRID (<http://seagrid2017.an.ismar.cnr.it/>)

SEAGRID represents a tool useful to evaluate the effect of a certain activity on a defined area, in relation also to other activities that can use the same space. The framework is under-development.
